### Yellow 259 Pigment Yellow 184 Preparation

**DESCRIPTION:** A bright yellow powder additive designed for use as a colorant in preparation of digital inks and thin films. This non-abrasive color disperses in common mediums to a submicron size with basic milling and dispersion work. The preparation contains chemically stable, heat and UV resistant inorganic pigment as a coloring agent. Colors are superior in opacity. It is non-migratory, bleed-resistant. Used to prepare inks and thin films that require exceptional chemical and heat resistance, and in applications where improved weather resistance is needed. Suitable for coloring water, solvent and UV digital inks. Ideal for high temperature thin-film coatings such as silicones and sol-gels.
